Undercutting: two experiments

Same key, node IDs and honest schedule; only the attacker's region changes.

Read ads at K → **Undercut earliest** → **Publish own ad** → **Wait for joins**

Experiment 1 · where the attacker sits

5 origins × 2 deadline windows

3 seeds each · 30 runs

Experiment 2 · is the failure ours?

Remove the attacker's own caution

and retry from Stockholm

28 local DHT nodes, 5–6 per region

Injected delays on one machine · group key known to the attacker
